

7. An incinerator as recited in claim 6, wherein said second end of said insulated shell opens into a clean out door, with said clean out door being positioned beneath said grate, and wherein said clean out door is large enough to allow the removal of waster products from said lower flame chamber.
8. An incinerator as recited in claim 6, wherein said grate includes a series of vertical grate channels which allow the passage of said flame from said lower flame chamber to said upper biomass chamber through said grate.
9. An incinerator as recited in claim 6, wherein said means for introducing said animal carcasses into said upper biomass chamber comprises a main hatch opening through said insulated shell, with said main hatch being large enough to admit said animal carcasses.
10. An incinerator for burning animal carcasses, comprising:
 - a. an insulated shell including an inner surface and an outer surface, having a first end and a second end;
 - b. a grate, placed horizontally within said insulated shell, so as to divide a space enclosed within said insulated shell into a lower flame chamber and an upper biomass chamber;
 - c. means for introducing said animal carcasses into said upper biomass chamber;
 - d. a burner placed at said first end of said insulated shell and beneath said grate, so
